VOLUME CONTENTS

VOL. 33, NO. 1 — 1993

V. P. Il'in — 1 — The rate of convergence of iterations of implicit incomplete factorization methods

N. L. Zmatrakov — 9 — Approximation properties of two-dimensional splines of the third and fourth degree

Sh. I. Galiyev — 19 — Directions of decrease for minimax problems

A. A. Abramov and K. Balla — 29 — Approximate solutions, based on comparison theorems, of scalar and matrix Riccati equations in an infinite interval

A. M. Matsokin and S. V. Nepomnyashchikh — 45 — The fictitious-domain method and explicit continuation operators

A. V. Razgulin — 61 — Self-excited oscillations in the non-linear parabolic problem with transformed argument

V. I. Gryn — 71 — Simultaneous determination of two coefficients of the three-dimensional equation of steady-state radiation transfer with isotropic scattering

N. D. Kopachevskii and V. N. Pivovarchik — 89 — The sufficient condition for instability of the convective motion of a liquid in an open vessel

A. F. Voyevodin — 103 — The stability and implementation of implicit schemes for Stokes's equations

M. P. Levin — 113 — A difference scheme of quasicharacteristics and its use to calculate supersonic gas flow

Short Communications

G. A. Bratsun and M. A. Sumbatyan — 123 — Investigation of stability of the method of auxiliary sources in practice

V. V. Varlamov — 129 — Energy estimates for the integro-differential equation describing acoustic waves in a medium with a "memory"

Yu. P. Golovachev and V. V. Zemlyakov — 135 — Non-stationary supersonic flow past a blunt body in thermal heterogeneities when there is turbulence in a shock-boundary layer

A. A. Cherepnin — 141 — Estimates of the regularity of recognition and classification problems

VOL. 33, NO. 2 — 1993

A. F. Izmailov — 145 — Second-order optimization methods

F. P. Vasil'yev and O. Obradovich — 157 — A regularized proximal method for minimizing problems with inaccurate initial data

R. K. Tagiyev — 165 — Estimating the rate of convergence of the straight-line and regularization methods in the problem of optimal control of the coefficients of a hyperbolic equation

D. L. Markin and R. G. Strongin — 171 — Uniform estimates for the set of weakly effective points in multi-extremum multicriterion optimization problems

Yu. A. Kriksin — 181 — A conservative difference scheme for a system of Hamilton's equations with external action

V. A. Novikov and A. N. Rogalev 193 The construction of convergent upper and lower bounds of the solutions of systems of ordinary differential equations with initial interval data

U. G. Abdullayev 205 On the existence of unbounded solutions of the non-linear heat-conduction equation with a sink

J. J. L. Velázquez, V. A. Galaktionov, S. A. Posashkov and M. A. Herrero 217 A general approach to extinction and blow-up for quasilinear heat equations

A. V. Latyshev and A. A. Yushkanov 229 Exact solutions in the theory of the anomalous skin-effect for a plate. Specular boundary conditions

M. G. Muradyan 241 The solution of a problem of transport theory

A. A. Mironov and V. I. Tsurkov 251 Approximation and decomposition by extremal graphs

Short Communications

I. Makrelov 263 On a modification of Chebyshev's method

M. N. Yatsimirskii 267 Fast algorithms for the discrete cosine transformation

S. N. Kudryavtsev 271 Approximate computation of the Fourier coefficients of the function $1/f$ from the Fourier coefficients of the function f

A. G. Perevozchikov and Ye. V. Chistyakova 275 The practical convergence of a global optimization algorithm

Ye. V. Zakharov and I. V. Khaleyeva 281 Hyper-singular integral equations of the first kind in problems of the diffraction of electromagnetic waves by open surfaces

V. D. Kiselev and S. A. Sukmanov 287 The use of duality to improve the efficiency of methods of solving the quadratic knapsack problem

VOL. 33, NO. 3 1993

A. F. Izmailov and A. A. Tret'yakov 289 The reversibility of homogeneous polynomial mappings of degree p

B. M. Mukhamediyev 301 The approximation of sets of guaranteed attainability of control systems with mixed constraints when there is interference

A. S. Strekalovskii 315 The search for a global maximum of a convex functional on an admissible set

B. Weber and V. G. Korneyev 329 A preconditioner of a finite-element matrix for a fourth-order elliptic equation

N. Yu. Bakayev 343 Almost unconditional *a priori* estimates of the solutions of parabolic difference problems

A. N. Muchinskii and V. A. Tsurko 357 Additive difference schemes for solving parabolic equations with mixed derivatives

S. I. Kulikov, A. I. Nesterenko and N. G. Nesterenko 365 The solution of the two-dimensional Stefan problem in a multiply connected domain

G. S. Kazacha and S. I. Serdyukov 377 Numerical investigation of the behaviour of solutions of the sine–Gordon equation with a singularity for large t

I. V. Zuyev and A. V. Tikhonravov 387 The uniqueness of the determination of the parameters of a stratified medium from the energy reflectance

M. A. Kravtsova 397 Numerical solution of the asymptotic problem of the separation of the boundary layer of an incompressible liquid in front of the corner point of the contour of a solid

Short Communications

Kh. D. Ikramov 407 Unitary-triangular factorizations of a normal matrix

A. G. PEREVOZCHIKOV 411 The stochastic method of generalized Clarke gradients for solving two-stage problems of stochastic programming with coupled variables

N. T. ALIYEV 415 An optimal method of constructing an ε-subgradient

A. S. BARASHKOV 419 A method of estimating the accuracy of the solution of an inverse problem without using a uniqueness theorem

A. D. POYEZD and N. A. TIKHONOV 427 Determination of the parameters of the model of an ion-exchange sorption model

A. V. SHCHEPROV 433 Calculation of a one-dimensional analogue of Couette flow

A. O. ALEKSEYEV, O. G. ALEKSEYEV and O. A. KULAGIN 441 Experimental estimate of the efficiency of an algorithm for solving the minimax travelling salesman problem

VOL. 33, NO. 4 1993

L. N. KOROTAYEVA, E. M. NAZAROV and A. G. CHENTSOV 443 An assignment problem

I. V. KONNOV 453 A two-level subgradient method for finding saddle points of convex–concave functions

M. R. DAVIDSON 461 A subgradient method for solving multiproduct network development problems with survivability guarantees

G. YU. KULIKOV 477 The numerical solution of the autonomous Cauchy problem with algebraic constraints on the phase variables

G. I. SHISHKIN 493 Lattice approximation of singularly perturbed degenerate elliptic equations

N. YU. BAKAYEV 511 Some problems of well-posedness of difference schemes on non-uniform grids

V. I. GRYN 525 Inverse problems of determining the absorption coefficient and the de-excitation function for certain spatial domains

A. V. LATYSHEV and A. A. YUSHKANOV 543 An analytic solution of the problem of the resistance of the interface between crystallites

A. V. KRAVTSOV and S. YA. SEKERZH-ZEN'KOVICH 553 Parametric excitation of the oscillations of a viscous two-layer fluid in a closed vessel

Short Communications

KH. D. IKRAMOV 561 The monotonicity of the eigenvalues of doubly symmetric matrices

S. A. SHISHKIN 565 The problem of calculating a perturbed inverse matrix as a convergent product

A. F. IZMAILOV and A. A. TRET'YAKOV 571 Factor analysis of non-linear mappings and generalization of the notion of 2-regularity

V. I. UL'YANOVA 575 The use of the operator splitting method in eigenvalue problems for an equation of the Orr–Sommerfeld type

VOL. 33, NO. 5 1993

R. LEPP 579 Discrete approximation of a problem of continuous programming

V. A. STRUSEVICH and N. V. SHAKHLEVICH 593 Optimal job-shop scheduling with two jobs in systems with unrestricted paths

U. G. Abdullayev 603 Unbounded solutions of the Kolmogorov–Petrovskii–Piskunov equation

N. Yu. Bakayev 615 A priori estimates for some classes of one-dimensional initial and boundary-value difference problems

G. N. Mil'shtein and N. F. Rybkina 631 An algorithm for random walks over small ellipsoids for solving the general Dirichlet problem

V. L. Kamynin 649 An approach to the mathematical modelling of highly heterogeneous flows of a viscous incompressible fluid

V. V. Ostapenko 663 Start-to-finish calculation of continuous waves in open channels

A. V. Razgulin 671 The convergence of difference schemes for generalized solutions of the problem of the thermal self-action of optical radiation

A. A. Charakhch'yan 683 Calculation of the compression of deuterium in a conical target in the framework of the Navier–Stokes equations for two-temperature magnetohydrodynamics

Yu. N. Sotskov 699 The stability of the approximate Boolean minimization of a linear form

G. K. Kamenev 709 The efficiency of Hausdorff algorithms for approximating convex bodies by polytopes

Short Communications

Kh. D. Ikramov 717 Invariant subspaces of real matrix algebras and Burnside's theorem

Yu. N. Kashtanov 721 The method of generations for estimating the first eigenvalue of the Dirichlet problem

Yu. D. Shmyglevskii 725 On a spiral flow

VOL. 33, NO. 6 1993

I. A. Blatov 727 Incomplete factorization methods for systems with sparse matrices

A. I. Astrovskii and S. K. Korzhenevich 743 Bilinear minimax problems with linear constraints: theory and numerical experiment

V. Ye. Podobedov 759 Optimal algorithms of maximization and approximation in calculations with an uncertain error

A. B. Vasil'yeva 775 The region of influence of a stationary solution of a singularly perturbed parabolic equation

B. G. Aksenov 783 Bounds of solutions of some non-linear non-monotone problems for the heat conduction equations

N. Yu. Bakayev 795 A priori estimates for certain classes of multidimensional difference initial-boundary-value problems

Chang Tieqiang, Chen Guangnan and Shen Longjun 805 A numerical method for solving the stiff problem in modelling laser target coupling

A. A. Osipov 815 A finite-element method for calculating the unsteady aerodynamic characteristics of a subsonic oscillating airfoil cascade

A. V. Badanin and B. P. Belinskii 829 Oscillations of a liquid in a bounded cavity with a plate on the boundary

Short Communications

Kh. D. Ikramov 837 Symmetrization of complex normal matrices

I. P. Mysovskikh 843 Reproducing kernels of a sphere and its surface

A. M. Yelizarov, Ye. V. Fedorov and D. A. Fokin 849 Variational inverse boundary-value problems of aerodynamics for subsonic gas flow

A. V. Bunyakin 857 Singular points of the solution of a seven-dimensional system for turbulent flow

Unpublished Paper

A. R. Poluektov 863 An iterational method for vector orthogonalization

VOL. 33, NO. 7 1993

A. M. Gomilko 865 On one class of infinite systems of linear algebraic equations

Yu. N. Subbotin 879 Inheritance of monotonicity and convexity in local approximations

T. M. Abasov 885 Normal sets and monotonic functions and their applications

A. Z. Ishmukhametov 891 Conditions of stability and the approximation of minimization problems

Ye. V. Zakharov, S. I. Safronov and R. P. Tarasov 907 Finite group algebras in iterational methods of solving boundary-value problems of potential theory

G. G. Malinetskii and G. Z. Tsertsvadze 919 The investigation of the Lyapunov spectrum of the Kuramoto–Tsuzuki equation

Zh. N. Kudryasheva 929 The solution of the problem of the motion of a conservative impurity in a river with a bed of arbitrary configuration

N. S. Bakhvalov and M. E. Eglit 939 Averaging of the equations of the dynamics of composites of slightly compressible elastic components

V. A. Serebryakov 953 A model and language for parallel computations in the solution of scientific problems

Short Communications

Zh. L. Korobitsyna 963 The method of fictitious domains for the Laplace equation with heterogeneous boundary conditions

F. A. Krivoshei 971 Stochastic model of the non-steady-state flow of a two-phase medium

A. M. Bishayev 977 The numerical simulation of a jet of rarefied weakly ionized gas emerging from an annular aperture

Unpublished Paper

Yu. G. Bulychev and S. A. Pogonyshev 985 Modelling of parabolic evolution equations of arbitrary order in discrete bases

VOL. 33, NO. 8 1993

F. P. Vasil'yev and M. Yachimovich 987 A stabilization method for solving lexicographic problems

M. K. Zavriyeva 997 The penalty method in linked max-min problems with errors

I. S. Litvinchev 1007 Bounds on the suboptimalization of aggregation in convex programming

A. V. Romanko and A. V. Fedoseyev 1017 Optimal control of economic systems with a growth structure

F. V. Lubyshev 1027 Approximation and regularization of problems of the optimal control of the coefficients of parabolic equations

U. G. Abdullayev 1043 A numerical method of solving inverse problems for non-linear differential equations

A. G. Sokol'skii and I. I. Shevchenko 1059 Computer normalization of Hamiltonian systems in analytic form

V. P. Shutyayev 1067 Perturbation algorithm for one slightly non-linear first-order hyperbolic problem

A. G. Zarubin 1077 On an iterational method for the approximate solution of an initial- and boundary-value problem for the heat-convection equations

G. A. Rudykh and E. I. Semenov 1087 The construction of exact solutions of the multidimensional quasilinear heat-conduction equation

V. T. Zhukov, A. V. Zabrodin and O. B. Feodoritova 1099 A method of solving the two-dimensional equations of the dynamics of a heat-conducting gas in regions of complicated shape

Short Communications

D. A. Iskenderova and Sh. S. Smagulov 1109 The Cauchy problem for the equations of a viscous heat-conducting gas with degenerate density

V. K. Leont'yev and O. G. Tarastsov 1119 On the accuracy of the input data in trajectory problems

VOL. 33, NO. 9 1993

M. B. Korolev 1123 The problem of constructing a matrix with a given determinant

Yu. A. Kriksin 1129 Energy bounds of some non-linear dynamical systems with an external action

A. M. Denisov and S. I. Solov'yeva 1145 The problem of determining the coefficient in the non-linear stationary heat-conduction equation

G. I. Shishkin 1155 Mesh approximation of singularly perturbed quasilinear elliptic equations which degenerate to a zero-order equation

Huynh Ba Lan, Le Thai Thanh, Nguyen Thanh Long, Nguyen Thuan Bang, Tran Luu Cuong and Trinh Ngoc Minh 1171 On the non-linear vibrations equation with a coefficient containing an integral

S. A. Ivanenko 1179 Adaptive grids and grids on surfaces

A. R. Maykov and A. G. Sveshnikov 1195 Conservative difference schemes for non-stationary Maxwell's equations in three dimensions

M. G. Girgadze and A. D. Myshkis 1207 Planar bending vibrations of a curved rod

V. V. Aristov and S. M. Kuznetsov 1215 On the numerical solution of the inverse problem of X-ray diffraction optics

V. K. Leont'yev and G. P. Tonoyan 1221 Approximate solutions of systems of Boolean equations

E. N. Gordeyev 1229 On the stability of bottleneck problems

Short Communications

S. V. Kartyshov and L. F. Yukhno 1239 On some modifications of Newton's method for solving the non-linear spectral problem

V. A. Kovtunenko 1245 An iterative method for solving variational inequalities of the contact elastoplastic problem by the penalty method

V. V. Gudkov 1251 The solvability of a multipoint boundary-value problem for the one-dimensional drift-diffusion model of a semiconductor multiterminal network

Yu. P. Golovachev and V. V. Zemlyakov 1257 Flow around a blunt spherical body in a supersonic turbulent wake

Yu. G. Smirnov 1263 On the solvability of vector problems of diffraction in domains connected through an opening in a screen

VOL. 33, NO. 10 1993

Yu G. Petrov 1275 A method of matrix inversion and factorization and its applications

A. P. Buslayev and M. V. Yashina 1287 Numerical methods in problems of best approximation by splines and non-linear spectrum analysis

Yu. I. Mokin 1299 A method of continuing functions across a curve with points of large curvature

V. N. Nefedov 1309 The complexity of the computation of a global minimum in certain classes of optimization problems

A. V. Razgulin 1323 The stability of self-excited bifurcation oscillations in a non-linear parabolic problem with transformed argument

Ye. N. Zhidkov 1331 Proof of the uniqueness of the solution of one inverse problem

A. N. Tikhonov Jr., A. V. Tikhonravov and M. K. Trubetskov 1339 Second-order optimization methods in the synthesis of multilayer coatings

V. I. Gryn 1353 The uniqueness of the determination of the absorption coefficient in the spherically symmetric case

A. A. Abramov, N. B. Konyukhova, S. V. Kurochkin, B. S. Pariiskii and V. Yu. Prikhod'ko 1365 Numerical investigation of axisymmetric free oscillations in a vacuum and excitation in a compressible medium of a prolate cylindrical shell with hemispherical ends

Short Communications

I. M. Sobol 1391 Asymmetric convergence of approximations of the Monte Carlo method

B. V. Arkhipov and V. A. Lyul'ka 1397 Computation of the rate of dissipation of Taylor eddies

M. Yu. Zheltov and M. P. Levin 1403 The method of quasicharacteristics in problems of the mechanics of porous media

VOL. 33, NO. 11 1993

R. P. Tarasov 1409 Numerical inversion of causative Wiener–Hopf operators and the digital-filter method for inverse problems of heat conduction

I. I. Golichev 1427 Iterative methods of solving ill-posed boundary-value problems

I. V. Boikov 1437 An adaptive algorithm for establishing functions in the class $Q_{r,\gamma,p}(\Omega)$

S. R. Nasyrov and D. A. Fokin 1447 Proof of the convergence of an approximate method of conformal mapping of the exterior of an airfoil on to the exterior of a circle

V. V. Ostapenko 1459 Approximation of the conservation laws on a non-uniform difference mesh

A. A. Charakhch'yan 1473 Almost conservative difference schemes for the equations of gas dynamics

G. P. Panasenko and J. St Jean Paulin 1483 An asymptotic analysis of junctions of non-homogeneous elastic rods: boundary layers and asymptotic expansions

M. I. Letavin 1509 Application of the theory of singular perturbations to the investigation of specimens placed in a heating oven under quasistationary temperature conditions

Short Communications

I. E. Stepanova and V. N. Strakhov 1523 On the construction of a regularized solution of the Fredholm integral equation of the first kind

S. D. Algazin 1531 Discretization of the Laplace operator and the fast solution of Poisson's equation for the exterior of a solid of revolution

A. R. Kasimov and D. M. Tartakovskii 1535 Estimation of tracer migration time in ground water flow

A. I. KALININ 1543 An algorithm for the asymptotic solution of the problem of the terminal control of a non-linear singularly perturbed system

A. S. ANTIPIN 1555 An interior linearization method

YE. B. KUZNETSOV and V. I. SHALASHILIN 1569 The Cauchy problem as a problem of the continuation of a solution with respect to a parameter

A. V. NESTEROV 1581 The asymptotic solution of a singularly perturbed parabolic equation with piecewise-smooth boundary condition

R. P. TARASOV 1589 Numerical solution of convolution-type equations on finite non-commutative groups

YU. A. KRIKSIN 1599 Non-local solutions of problems of non-linear dynamics

O. V. TROSHKIN 1613 Perturbation waves in turbulent media

L. V. DORODNITSYN 1629 Kinetically compatible difference schemes for modelling reacting flows

A. S. AZARENOK, V. N. MARTYNCHIK and N. N. METEL'SKII 1641 Computation of generalized convex approximations of planar geometric objects

Short Communications

A. B. PEVNYI 1653 Green's function of the difference analogue of a polyharmonic operator and discrete splines

YU. A. YEREMIN and A. G. SVESHNIKOV 1657 An efficient method of analysing acoustic scatterers

A. A. BELANOV 1661 A universal version of Lobachevsky's method for determining the roots of polynomials

YU. D. SHMYGLEVSKII 1665 Spiral flows of ideal and viscous liquids
